

Why SKF?

SKF SEALS AND SPEEDI-SLEEVE new generation

SKF SPEEDI-SLEEVE is a well-proven solution to problems resulting from worn shafts. It can be installed without having to disassemble the shaft or specify a new replacement seal size, and offers an excellent sealing surface. With the new generation SKF SPEEDI-SLEEVE, even further enhancements to sealing system performance are available.

To seal effectively, radial shaft seals must run against a smooth, round counterface, most often a shaft. If the shaft becomes worn or damaged, the seal will no longer be able to retain lubricant and to exclude contaminants. To repair the shaft, it is usually necessary to disassemble the machine to be able to rework the shaft until it is again within specification.

By using SKF SPEEDI-SLEEVE, this costly procedure is no longer necessary. The sleeve is simply pushed into position over the worn area without any special tools, providing a new, optimized seal counterface.

Easy Repair of Shaft Damage!

Common Applications

- Industrial Gearboxes
- Off-Highway vehicles for construction and agricultural
- Mining, minerals processing and cement production
- Industrial electrical

User Benefits

- Increased service life predictability
- Minimized maintenance
- Increased productivity
- Reduced environmental impact

Product Features

- Proprietary stainless steel material and manufacturing process
- Increased strength and excellent ductility properties of the sleeve
- Optimized seal counterface surface minimizing wear on both the sleeve and sealing lip
- Imperceptible lubricant pockets to prevent dry running of the sealing lip

All Sizes In Stock at Your Local Miller Branch

Central Office
17 S. Westmoreland Dr.
