LanoPro Environmentally Acceptable Lubricants

LanoPro supply a full range of premium grade VGP approved greases for all oil-to-water interfaces. Here is a selection of the top selling products, now available to Incentra members from Uno-X.

LanoPro Marine Grease EP2 EAL

Superb adhesion, corrosion protection, and water resistance properties make LanoPro Marine Grease an ideal choice for a diversified use in wet conditions across the vessel. This new generation calcium thickened grease has OEM approvals for rudder bearings and PBCF.

It is in particular suitable for a wide variety of deck applications, such as slow moving gears, hinges, general lubrication, wires to mention some.

LanoPro Marine Grease EP0 EAL

A softer version of the Marine Grease with the same strengths as the higher viscous EP2. The Marine Greases tolerate very low temperatures, and they are pumpable in centralized lubrication systems. The EP0 version is in particular suited for rudder bearings, submerged pumps and general deck equipment; winches/cranes, slides, hinges, where a softer grease is needed.

LanoPro Wire Grease ST2 EAL

A premium grade grease designed for maximum protection of steel wires. The product forms a protective shield against harsh and wet conditions and significantly reduces friction on the cords. It contains lanolin which provides superb corrosion protection, and the unique thixotropic properties of the grease make it penetrate extremely well when using a pressure lubricator.

LanoPro Wire Oil 30 EAL

A premium grade semi-thick oil designed for frequent use in harsh conditions. It has excellent penetration and corrosion resisting properties and is especially formulated for lubrication and protection of wires, where the use of grease and pressure lubricator is not possible. ie Towing wires, or other large wires.
