

Make sure your  
surfaces are clean  
and bacteria-free!

B.EL.D™ is a portable and easy-to-use device that in 1 minute determines if the tested surface is clean – no need to wait for a laboratory test to make quick hygiene verifications!

It is reliable and safe, making sure your cleaning methods have effectively removed all bacteria. Compared to other methods that can provide false positive results by detecting both live and dead bacteria, B.EL.D™ responds only to alive bacteria.

## Elevate your high standards for hygiene with B.EL.D™

- sensitive to a wide range of bacteria
- up to 99% accurate
- portable and wireless
- can be used on a variety of surfaces
- cost-effective tool

## Sample – Swab – Mix-Test – Result in 1'

Sample the surface area within the 100 cm<sup>2</sup> swab frame, swab thoroughly, mix the swab stick with the buffer liquid, dispense 8 drops onto the electrode, read the result on your phone or tablet

That's it! Easy.

Involve the entire organization by  
setting up BW dashboards that can  
be monitored at sea and on-shore.

The B.EL.D™ mobile application and dashboard allow users to quickly and easily connect their devices, analyze results, store data, share with their team, and generate insightful reports.

# AQUAREX

Care. People. Planet.

We are strong in safe potable water, ECA water cleaning and on-line hygiene diagnostics, for the maritime industry.

Our products and services are based on cost-efficient, eco friendly and safe solutions.

- Safe Drinking Water Purification
