The tape is designed to attach quickly to a wide range of existing standard MMC vapor-control valves. An adaptor is available for non-MMC valves.

## System Components & Accessories

Sturdy molded carrying case keeps tape and accessories safely in place during transporting and storage.

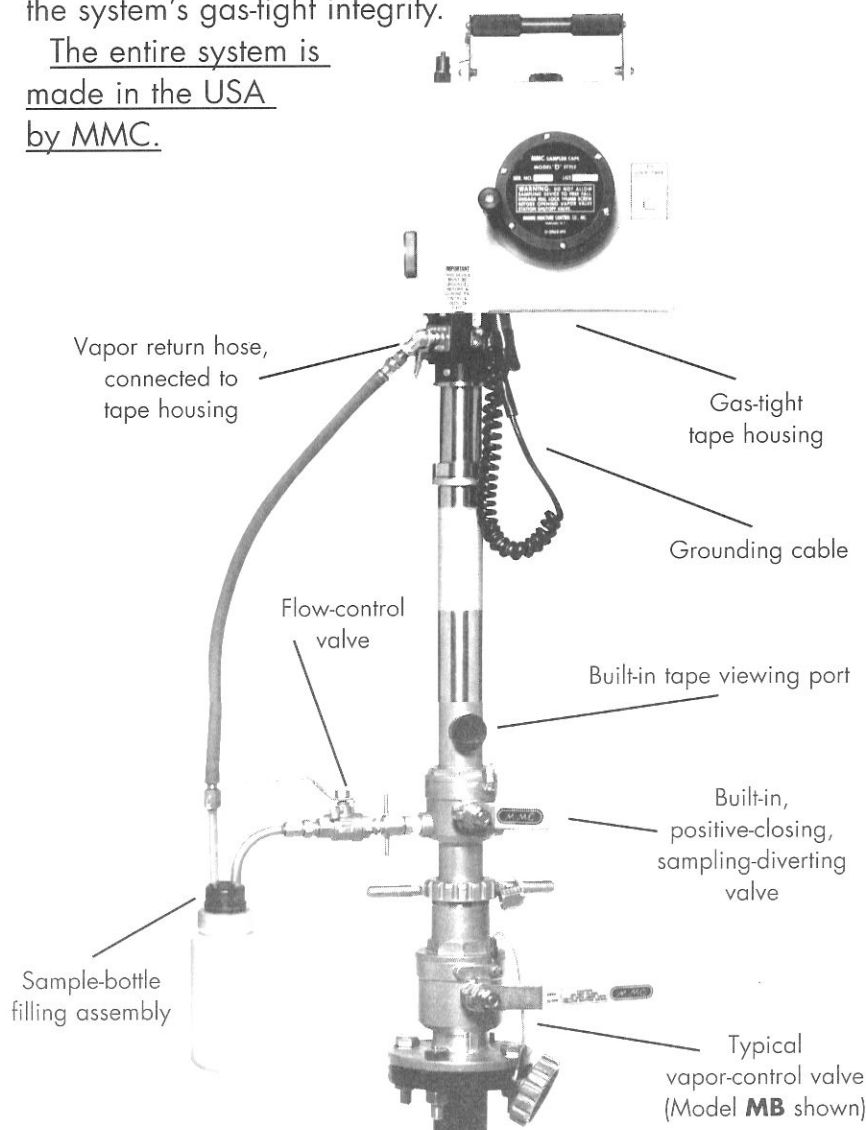

**Sampling Bottles**  
Laboratory grade, non-breakable 1/2-liter sealable bottles. Available in quantity. Carrying rack sold separately (4-, 6-, 8-, and 12-bottle racks available).

## SYSTEM'S FEATURES

MMC's portable Self-Contained sampling system and its integrated sampling diverter valve operates autonomously to that cargo tank's vapor-control valve (VCV). Once the system is attached to any existing MMC VCV, it can extract and bottle a sample in place, without exposing the sample to the atmosphere.

The system is gas-tight and has been designed to meet or exceed all existing vapor-control regulations. The system uses a unique vapor return hose assembly to direct the sample bottle's vapors back to the tape housing to maintain the system's gas-tight integrity.

The entire system is made in the USA by MMC.
