List of medicines and equipment IMDG/MFAG

Preamble

1. Medicines and equipment already available in the ship's medicine chest may be counted towards the IMDG/MFAG numerical requirements outlined below.
2. In some cases, alternatives are given. This means that one of the given alternatives should be chosen.
3. Not all drugs and antidotes on the list may be licensed as pharmaceutical specialist in all member states and thus available for general purchase. In such case , the national authorities may issue a modified list , also in English, where drugs on the below list not available are substituted with analogue drugs in corresponding quantities.
4. In countries with official lists of contents of a ship's medicine chest, the national authorities can decide to substitute some of the drugs on the below list with analogous drugs available in the ordinary ship's medicine chest. See appendix one for the national lists which deviate from the IMDG/MFAG.
5. The recommended minimum quantities are based on an estimate of risk to persons on board and the time within which full treatment on shore can be given.
6. National authorities can decide on exemption from carrying these medicines for vessels making short regular voyages of 10 minutes or less.

Labelling, storage and dispensing should, in general, conform to the relevant specifications in the IMGS. Contents and storage conditions should be checked at least once a year, taking account of the manufacturers expiry date and instructions. Medicines used should be replaced as soon as possible.

Column A: Shows the recommended minimum requirements for ships carrying dangerous good when casualties cannot be hospitalized on shore within 24 hours.

Column B: Shows the recommended minimum requirement for ships carrying dangerous good when casualties can be hospitalized on shore within 24 hours.

Column C: Shows the recommended minimum requirement for ships carrying dangerous good when casualties can be hospitalized on shore within 2 hours.

A minimum of 44 L/200 bar oxygen of which there should be at least:

- One complete portable set with 2L/200 bar oxygen ready for use with a spare cylinder of 2L/200 bar.
- One oxygen cylinder of 40L/200 bar (at ship's hospital, assembled for direct use) with one flowmeter unit(two ports) for supplying of oxygen for two persons at the same time. If more than one non-portable oxygen cylinder is used, there must be two flowmeter units for supplying of oxygen for two persons at the same time.

List of medicines and equipment

Preamble

Column A: Cargo ships, sailing ships and fishing vessels with an unlimited sailing area.

Column B: Cargo ships, sailing ships and fishing vessels with a sailing area that does not extend beyond GMDSS sea area A2 as referred to in regulation IV / 2 of the SOLAS Convention and cargo ships.

Column C: Passenger ships carrying out short international or national voyages as referred to in regulation III / 3 of the SOLAS Convention and passenger ships certified in accordance with the SCV Code with which travel is undertaken in exposed waters (exposed waters) as intended.

Max.: Maximum quantities.

1. The quantities specified in columns A to C apply to vessels carrying up to 15 crewmembers. Quantities must be multiplied for each extra group of 15 crewmembers, With the understanding that the quantities stated in column Max. are the maximum quantities needed.
2. For a ship carrying 15 to 24 crewmembers, the quantities only have to be increased by 50 percent. If the quantity of a product mentioned in the tables is one, it remains one quantity.
3. Medicines and equipment already available in the ship's medicine chest may be counted towards the IMDG/MFAG numerical requirements outlined below.
