

Filtration

Lubrafil

Flexible thinking, solid solutions

OIL

Portfolio

Selecting the right product for the application is critical. Maintaining the right level of quality is essential.

Over the years, Lubrafil have built up, step by step, a broad range of products that provide Plant Operators with optimum solutions to their requirements. We preserve a prominent place for strong brands, all with leading positions in their own fields. We never seek to compromise but always optimize our solutions as reliable performance, long-term durability and efficient operation are our 'watch words'.

Cross reference

When it comes to OEM spare parts, and the way that they are supplied, packed and marked, Customers are often uncertain of what they are getting.

Lubrafil removes the guess-work with clear filter element identification part numbering system and description. Our Cross-Reference Database makes it possible to match original brands with equivalent product of high quality at very attractive prices, and in most cases, straight from the shelf.

Key-supply

An area of specialization that Lubrafil are continuously developing is the ability to take care of the total filtration package a customer needs. This incorporates all aspects of the supply, aiming at saving time and costs, whilst offering measurable performance. Our Customer's ERP processes are readily recognized and with reliance on an adequate safety stocking policy, the delivery of critical components is guaranteed.

Our tailor-made product identification system, labelling and marking procedures facilitate smooth routing and safe receipt at the Customer's delivery site.

WATER

AIR

Service, Maintenance and Repair

As exclusive distributor of Boll & Kirch filter products, Lubrafil want to ensure that our filters keep doing what they were intended for.

The service that we offer, is therefore complete:

- 24-7 Service capability
- Service and maintenance on request or contract based
- Scheduled maintenance and installation
- Factory-trained service engineers
- Monitoring and analyzing installations
- Ultrasonic cleaning of filter elements
- Reconditioning of complete filters

Warehousing and Logistics

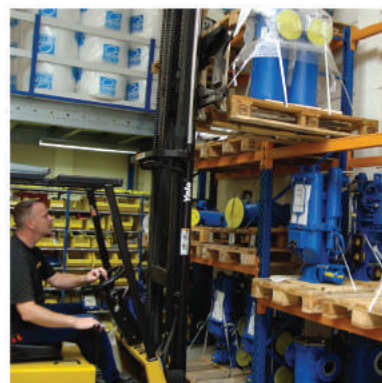

Meeting delivery requirements with punctuality can only be realized when warehousing and logistics are organized in the best possible way. Stock and short lead-time supply lines need to reflect what the market demands. Lubrafil's stock monitoring and market knowledge provides the information to act and react. Having adequate space to hold stock of vital products and popular branding is important but the ability to get products where and when they are needed is essential..

You can count on us

In this leaflet we described our drive to serve you and the abilities we have to do so. You can count on us for all your questions, queries and requirements regarding filtration in the broadest sense of the word.

We are only a phone-call or e-mail away; so please contact us at any time. Our specialists will be delighted to help you.

Flexible thinking

As your established partner in the Filtration business, Lubrafil apply "Flexible thinking" as a tool and constant motivator with the sole objective of achieving our Customer's goals.

Our team is constantly honing their skills to serve the market in the best possible way. Specialization and versatility go hand in hand.

Solid solutions

The fundamental importance of Filtration is undisputed. That's why we never take things for granted. Our philosophy, based around flexible thinking, is essential to solid solutions. Our sphere of work is broad and reflects the variety of applications that we serve. Whatever the problem, it always requires a solid solution. That's what Lubrafil stands for.
