## Inspections and condition reports

Before starting a retrofit/conversion project we recommend to have TEKNOTHERM Marine onboard for making an inspection and survey of actual plant.

TEKNOTHERM Marine can offer you qualified technicians giving you the optimal solution for the job.

This makes it easier and more convenient to have negotiations towards an order, and gives you as a customer the best overview and saves both time and money.

## Retrofit and replacement units

TEKNOTHERM Marine can deliver complete units either as direct expansion systems, or as chilled water solutions with the most optimal refrigerant for the purpose.

Typical plants are provision and aircondition units, and also RSW-units and freezing applications for fishing vessels. We have a huge production of own designed units. Installation is normally done by yard with supervision with one of our service engineers.

## Conversions

TEKNOTHERM Marine is also able to make conversions at site, by either changeover of refrigerant, or by rebuilding existing plants.

We then normally deliver new compressors, mainly screw compressors. Further e.g. new oil separators, electronic expansion valves, new starter equipment, and other relevant equipment. Skilled service engineers will supervise and commissioning such projects.

## Ventilation/HVAC equipment

Making retrofit/conversion of e.g. aircondition plants includes many times also renewing of ventilation equipment.

TEKNOTHERM Marine co-operates with well reputed HVAC-suppliers, and are able to include scope as replacement of complete airhandling units and other relevant HVAC equipment. Many large conversion projects has been performed this way, and the advantage is only one main contractor/supplier for the customer.

## Components

TEKNOTHERM Marine can offer a wide spectre of own designed/produced refrigeration components for both refrigerant HFC and NH<sub>3</sub> (ammonia). Our modern factory in Halden having a highly educated staff of engineers and skilled labour for the different product lines. The most common components are different types of RSW-chillers, sea-and freshwater cooled shell and tube condensers, and several types of oil coolers and heat exchangers. Please enter our web.site [www.teknotherm.com](http://www.teknotherm.com) for the different products and specifications. TEKNOTHERM Marine can offer custom

made solutions on short notice. Further we are able to quote for the most common society classes and/or CE-marked. Due to short decision lines within the company we can normally also deliver components with short delivery times. This is especially important for e.g. retrofit, conversion projects. TEKNOTHERM Marine is well known for their good and reliable quality.

## Spare parts

TEKNOTHERM Marine is able to fulfil all demands a customer may have versus refrigeration and ventilation spares.

TEKNOTHERM Marine has very good access to compressor spares for almost every brand, like the Bitzer, GEA Bock, Mycom, Carrier and Stal types.

Our parts access includes of course all other relevant parts/ items for refrigeration, including the total Danfoss scope. Parts can either be delivered to your local forwarder for consolidated freight, or directly to vessels world-wide using courier transport.
