

Mobile communication systems integrator

Communication
when and where needed

NAVTEAM
Professional Communication

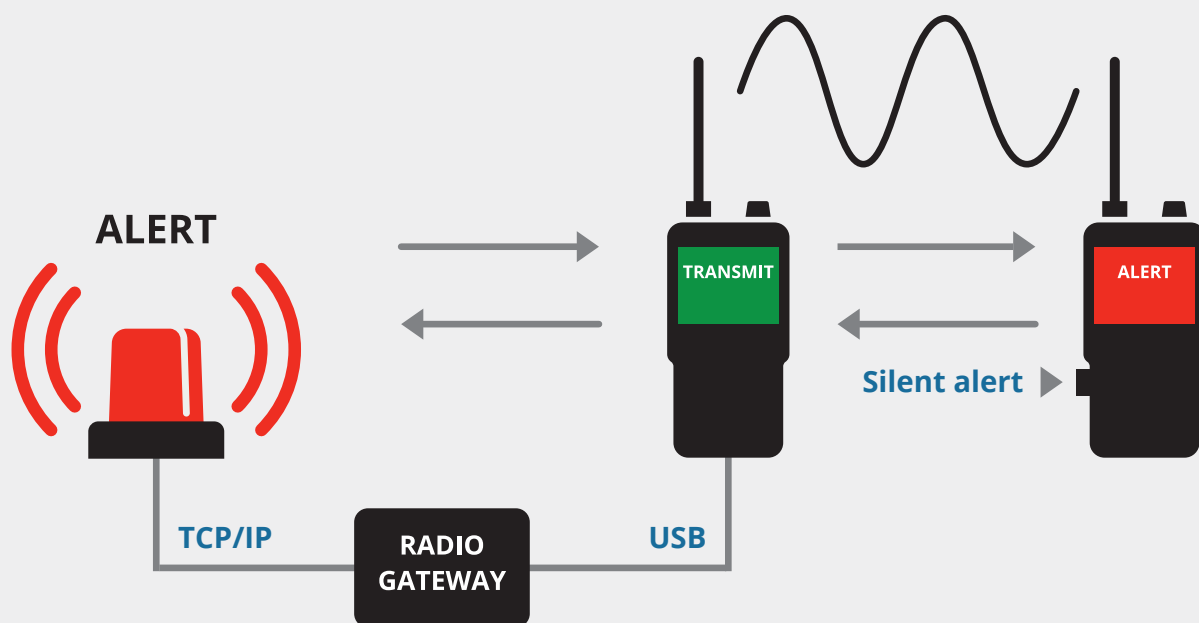

Radio gateway

Very often, simple solutions are the most valuable solutions!

Navteam offer a low cost customized "alert to radio" gateway solution with two-way acknowledge responses. The solution is a network based system, consisting of devices connected via a radio gateway. The system is able to receive messages, process the messages by rules, and forward them to a radio display or to a mobile subscriber by SMS.

The system is also able to track radios by GPS, monitor a "man-down" alert function and more. The radio gateway solution can operate as a stand-alone system or connect to leading DMR systems. The hardware include a processing unit and a mobile radio of choice, and it is delivered pre-assembled and connected in a 19" rack shelf with a 230V AC power supply.

A simple solution and easy to use!

- Alert forwarding to connected radio systems
- Text messaging to connected radio systems
- Telemetry functions
- GPS tracking, emergency and lone-worker functions

Onboard communication

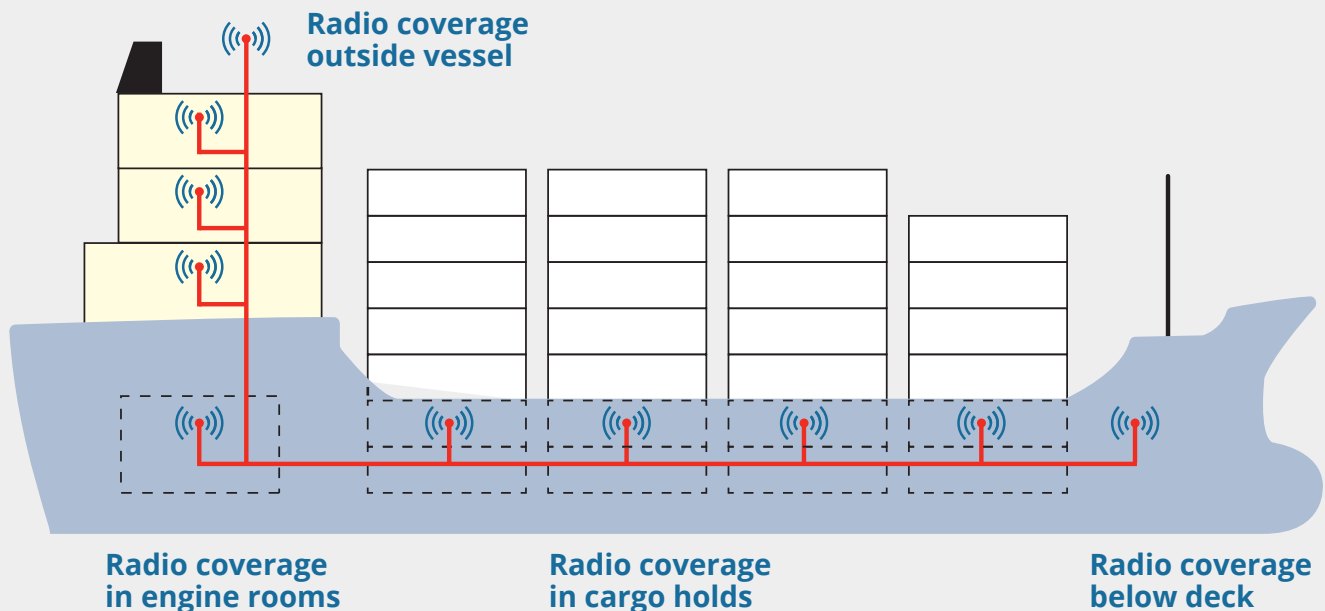

Navteam communication solutions enable high quality radio communication onboard the vessel.

The old-days' low channel capacity is replaced by modern digital technology, presenting digital talkgroups. Connection to subscribers is carried out by digital radio carriers.

With modern features built in the radio handset, such as Bluetooth, GPS, man-down-alert, and lone worker, you are able to monitor and track each handset, if necessary. This function is essential in case of emergency.

Navteam communication solutions offer the personnel/crew a high level of security when working alone on large seagoing vessels, or in other hazardous work areas.

Priority and emergency calls are also a built-in feature, that offers the possibility to interrupt ongoing conversations with important broadcast messages. Connect the communication system to a PBX telephone system and talk seamlessly between systems, even in full duplex, as a normal telephone conversation. Navteam communication solutions offer a wide range of options and features to meet all needs and expectations.

- Digital radio communication
- Telephone interconnection
- Prioritized emergency calls
- Alert handling and escalation

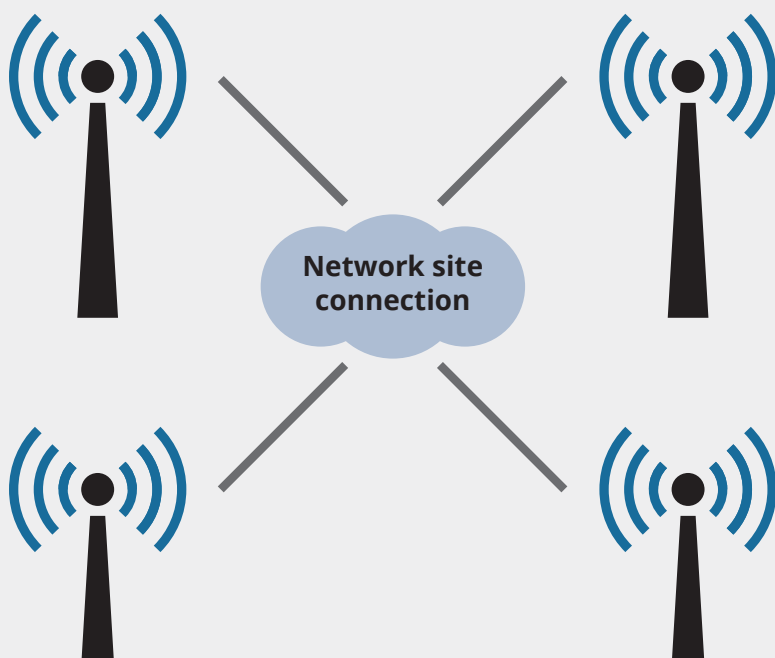

Multi site connectivity

The scaleable Navteam communication solutions offer multi site connectivity and stable radio connections. Radio conversations and seamless roaming between sites are key elements in large working areas, where employees are relying on a stable radio connection.

The feature of connecting sites permits wide area coverage or border crossing communication with the means of standard network infrastructure. Four+ ports can easily connect and share talkgroups and communication features.

Control rooms

Control room radio management solutions for large operating areas can include features such as real time tracking of operative personnel, alert control systems with escalation features, systems health monitor, remote control of radio terminals and radio terminal dispatchers. In close cooperation with our partners, we are able to provide a large variety in control room solutions, tailor-made for our customers.

- Connect multiple radio sites
- Private calls between sites
- Control room and dispatch solutions
- Unified communication systems

Professional communication and integration

Navteam communication solutions cover a wide range of professional communication and integration solutions within the field of mobile technology. With more than 15 years of experience from the marine industry, Navteam has an indept knowledge of the market. We know the market, we know the business, and we design the solutions of future communication requirements.

Tailor-made and scalable solutions

We are proud to deliver the highest quality of communication systems on the market, and our solutions are fully scalable and

designed to cover every business size and environment. Each system is unique and tailor-made. During the entire project process, we work closely with our customers in order to secure that both expectations and requirements are met.

Integration and installation

Our solutions support integration and installation at any location, from stand-alone systems or as part of a network connected system.

With integrated external alarm handlers, radio trackers and dispatching stations, our solutions are able to cover every need in modern digital communication.

Newest technology and expert guidance

Our engineers are duly trained within the newest communication technologies and thus able to extend expert guidance on installation and configuration of systems.

Quality products from leading, international manufacturers

We offer a complete range of communication products from leading international manufacturers, ensuring our customers the most value-for-money experience, and with several warranty product schemes, our customers can feel safe and secure.

Navteam is your knowledge centre and system integrator strategically located in southern Denmark.

Since 2001, we have grown steadily under the motto: Commitment, Flexibility and Attention for your business.
