

MARINE

Roxtec

CABLE & PIPE TRANSITS FOR MARINE APPLICATIONS

We Seal Your World™

Safe Blue Seal

There is a simple way of bringing peace and safety to a ship, no matter if it is an advanced navy ship, an offshore supply vessel or the world's biggest luxury cruise liner. Make sure you specify, design for and install Roxtec cable and pipe transits – the blue seals made for the Seven Seas.

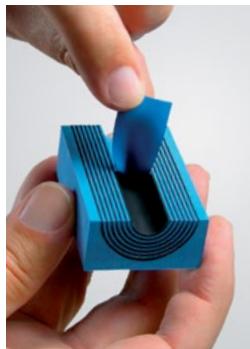

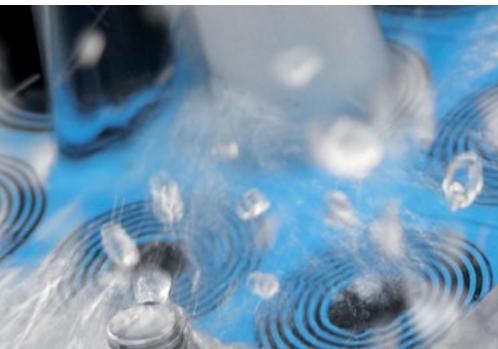

Efficient solutions

Roxtec cable and pipe transits ensure operational reliability by providing certified protection against fire, gas, water and dust. The corrosion resistant and area efficient seals help you reduce vibration, noise, and overall weight. They are also available in EMC versions for electrical safety and protection against electromagnetic interference and as ATEX/IECEx certified products for use in explosive atmospheres.

Upgrade – anytime

The Roxtec sealing system is easy to use and quick to install. The sealing modules are adaptable to cables and pipes of different sizes and offer built-in spare capacity for future needs and upgrades. You can open up the transits whenever you want – and just add new cables or pipes.

ROXTEC IN ACTION

Discover some of the applications in the marine industry where Roxtec cable and pipe transits are used to protect life and sensitive equipment. Approved by all major classification societies, Roxtec transits are recommended both for new build and retrofit projects.

PROPELLION ROOM

Propulsion machinery spaces.

Needs and requirements

- Fire protection
- Gas-tight
- Watertight
- EMI protection
- Capacity to withstand temperature changes
- Vibration damping
- Area efficient multi-cable management

GAS-TIGHT AREA

Gas-tight seals ideal for use in areas where there is a need for maintaining the pressure.

Needs and requirements

- Firestop
- Water barrier
- Gas-tight
- Pressure resistant

EMC APPLICATION AREAS

Sensitive equipment ensuring data, security and functionality onboard.

Needs and requirements

- EMC, electromagnetic compatibility
- Electromagnetic shielding against EMI

Optional sealing solution:

Roxtec SRC

Optional sealing solution:

Roxtec S

Optional sealing solution:

Roxtec SF EMC

SERVICE PIPES

Single or multiple pipes for air compression and cooling; plastic pipes for reduction of overall weight.

Needs and requirements

- Fire protection
- Gas-tight
- Watertight
- Noise reduction
- Vibration damping

ROOM PENETRATIONS IN DECKS AND BULKHEADS ABOVE THE WATERLINE

Cable and pipe penetrations in decks and bulkheads between fire zones.

Needs and requirements

- Firestop
- Gas-tight
- Watertight
- Multi-cable management

CABINS

Light-weight and versatile solutions recommended both for new build and retrofit projects.

Needs and requirements

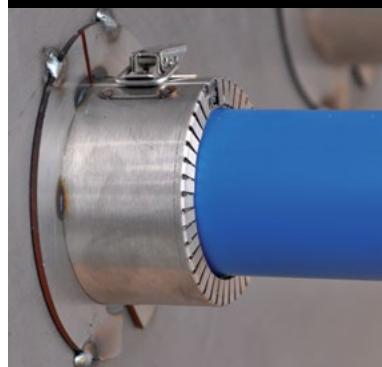

- Gas-tight
- Watertight
- Easy installation
- Minimal insulation

Optional sealing solution:

Roxtec RS

Optional sealing solution:

Roxtec Sleev-it™ Fire penetration seal

Optional sealing solution:

Roxtec ComSeal™

OUTER LIGHTING

Round seals for single wires through outer bulkheads for external lighting installations.

Needs and requirements

- Area efficient
- Fire protection
- Watertight
- Adaptability to cables of different sizes

Optional sealing solution:

Roxtec RS

WATER PIPES

Light-weight seals for steel pipes and plastic pipes as well as fire collars and steel-to-plastic transition collars.

Needs and requirements

- Fire protection
- Gas-tight
- Watertight
- Vibration protection
- Easy installation
- Non-welding solutions

Optional sealing solution:

Roxtec RS PPS

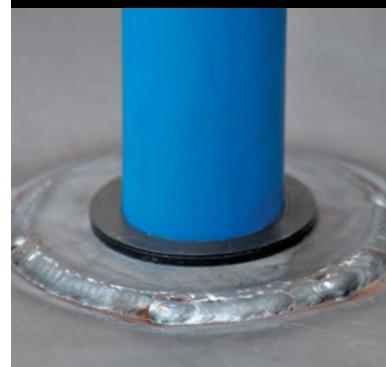

CABIN SERVICE LOCKERS

Management and sealing of service pipes and cables connected to the cabin locker area behind the cabin.

Needs and requirements

- Firestop
- Combination of steel and plastic pipes

Optional sealing solution:

Roxtec Sleev-it™ Watertight penetration seal

ROOM PENETRATIONS BELOW THE WATERLINE

Multiple cables penetrating decks and bulkheads.

Needs and requirements

- Fire-proof according to A-0 to A-60 marine fire rating
- Watertight according to class approval programs
- Smoke protection
- Pressure rated
- Vibration damping

Optional sealing solution:

Roxtec S

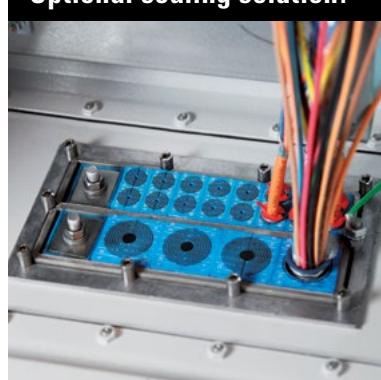

COMMON OPERATION ROOM

Efficient solutions for EMC, electromagnetic compatibility, inside and around the operation room.

Needs and requirements

- Equipment protection
- Data security
- High-precision operation
- Electromagnetic shielding

Optional sealing solution:

Roxtec CF EMC

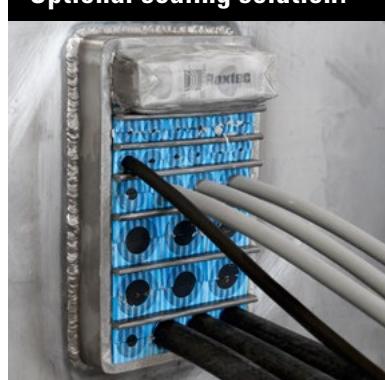

BRIDGE OPERATION ROOM

EMC cable and pipe transits developed to guarantee electromagnetic shielding.

Needs and requirements

- Fire-resistant
- Watertight
- Gas-tight
- Electromagnetic shielding
- Protection for sensitive equipment

Optional sealing solution:

Roxtec S EMC

Sealing solutions for any ship

Shipbuilders and ship owners standardize with Roxtec transits for cables, metal pipes and plastic pipes. Approved for A class rated sections, the seals handle fire, water, gas pressure, thermal bridges, and material fatigue in any kind of vessel, from work boats to mega yachts.

Cruise liners and ferries

With Roxtec, it is easy to add cables, metal and plastic pipes whenever it is time for new attractions. Upgrades can be performed while cruising – and without risking structure or passenger safety. This barrier against fire and water holds down the total cost of ownership.

Roxtec in the cabin

Roxtec seals are light-weight, versatile and easy to install solutions providing certified fire protection. They prevent fire, gas or water from entering the next compartment. The seals are area efficient and require minimal welding and insulation.

Navy ships

Reliability is key. Besides water-tightness and blast load durability, the Roxtec EMC product line ensures protection against electromagnetic threats and prevents disclosure of electronic signatures. Vibration damping, area efficiency, and plastic pipe solutions contribute to lower overall weight, more space onboard and silent operation. All components have been tested to provide certified protection.

Roxtec in the common operation room

Roxtec has developed efficient solutions for EMC inside and around the operation room. The cable and pipe transits ensure electrical safety. Use Roxtec transits to prevent EMI and secure high-precision operation.

Commercial shipping and supply vessels

Ship owners specify Roxtec to be able to operate their ships and maintain their value for years. Designers and installers all over the world recognize that Roxtec transits make it easy to upgrade and even inspect ships in accordance with new technical and safety demands. For hazardous areas, Roxtec provides ATEX/IECEx certified seals.

Roxtec around the water pipes

Roxtec offers light-weight seals for steel pipes and plastic pipes as well as fire collars and steel-to-plastic transition collars – and all of them are very easy to install. Most Roxtec seals can be installed horizontally or vertically from one side – and there are versions available that do not require any welding.

Special purpose ships

Roxtec standard and customized seals are used for everything from high-precision bow thruster systems to underwater operation equipment and cranes. They protect against fire, gas, water and vibration while keeping the ship prepared for upgrades. This extends the life cycle – without increasing costs.

Gas-tight area

Roxtec solutions do not only act as firestops and water barriers. The seals include features such as gas-tightness, making them ideal for use in areas where there is a need for maintaining the pressure. If, for example, there is a fire nearby and the atmosphere is filled with explosive chemicals and toxic substances, it is crucial to be able to keep dangers out by pressurizing the vessel's interior.

Yachts

Roxtec seals give outstanding possibilities to accommodate new technologies. The ability to handle plastic pipes of different sizes helps reducing overall weight and the risk of corrosion. Add also the excellent sound and vibration damping, which improves the total yachting experience.

Outer lighting

Roxtec round seals for single cables are perfect for use in outer bulkheads when you want to secure external lighting installations, for example on passenger cabin balconies. The solutions are neat and area efficient, and provide superior protection against fire and water.

First class performance

Do you fear a fire onboard? Or water flooding from one compartment to another? We can provide you certified protection – thanks to our thoroughly tested cable and pipe transits.

You can use the Roxtec sealing system to seal all types of penetrating cables, steel pipes and plastic pipes passing through decks and bulkheads, in and between different sections and constructions such as machine rooms, storage rooms, living compartments and the bridge. You can also use it in various types of control cabinets, electrical enclosures and junction boxes.

Certified for peace of mind

Our sealing solutions bring peace of mind to your project, because they have undergone hundreds of registered tests and approvals and received more than 250 certificates showing their excellent performance and resistance to hazards. Roxtec products are fire tested and approved for use in A, B and H class rated sections according to IMO Res. A 754 (18)/IMO FTP 2010 and SOLAS, and tightness tested according to DNV type approval program 8-471.19-1. The Roxtec sealing system is also approved according to different military standards in various countries.

Eliminating risk factors

Roxtec seals ensure protection against fire, water, gas, salt, and dust. They can protect against the risk of explosion, lightning strikes, and noise. They also offer solutions for bonding, grounding, and EMC. The system is well suited for sealing of hydraulic pipes, since the rubber absorbs vibrations. It is a high quality sealing system designed to withstand tough conditions.

- A, H and jet-fire rated
- Gas-tight
- Watertight
- Dust-tight
- Corrosion protection

- Vibration-proof
- Noise reduction
- Blast load protection
- Hazardous locations

- Electromagnetic shielding
- Potential equalization
- Lightning strike protection
- Bonding and grounding

Safety awareness

Our process of developing standard sealing products and creating customized solutions is supported by our procedures for testing. We have a technical center with an advanced test laboratory in combination with a fire laboratory, daily used for R&D, indicative as well as third party witnessed tests. Our type approval certificates, issued by the classification societies, are of course issued on basis of tests conducted at IMO recognized/accredited test laboratories.

- A and B class fire (standard, fibrous)
- H class fire (hydrocarbon, oil-based)
- Water pressure tests up to 6 bar
- Gas pressure test up to 2.5 bar
- Pull-out tests
- Periodic cycling
- Simulated IP rating tests
- EMC testing
- Vibration testing and analyzing

Verified by inspectors

Roxtec products are certified by all leading classification societies such as Lloyd's Register of Shipping, American Bureau of Shipping, Bureau Veritas, DNV GL and Russian Maritime Register of Shipping.

It is, however, important to remember that the certified protection provided by the Roxtec sealing system depends on correct attachment to the structure by welding or bolting as well as a correct installation procedure. Read more about this on pages 220 and 264 and on www.roxtect.com.

Focusing on sustainability

We do not just believe in safety. We also care about the people, the nature and the oceans of our beautiful blue planet. Therefore, we assure quality and minimize our environmental impact.

Roxtec International is certified in accordance with the quality and environmental standards ISO 9001 and ISO 14001. Among the components we produce, you find steel frames and vulcanized rubber, but you can be sure that no Roxtec labeled products contain any dangerous materials. We follow national and international environmental legal requirements. We respect environmental objectives and ethical issues as well as issues concerning chemicals and law requirements such as RoHS and REACH. We also handle our waste correctly to save our planet.

Design your own transits

The Roxtec Transit Designer™ is a free, web-based engineering tool. It allows auto-planning, drives project efficiency and reduces the risk of mistakes in all project phases.

The Roxtec Transit Designer simplifies product selection as well as the entire process of designing, purchasing and installing cable and pipe transits. Its batch import with auto-validation feature helps designers create and update thousands of transits automatically and take full control of their largest project designs. They can also validate their complete project by using the Roxtec CAD symbols and the Roxtec Transit Designer for easy incorporation of transits into the design of the entire ship or vessel.

Always available, everywhere

Roxtec Transit Designer is accessible online. You can share your work with project teams worldwide, and Roxtec experts are always available through the chat function. To start using it, just register on www.roxtc.com.

Features

- Free web-based application, available online
- Simple product selection
- Copy and paste for cable or pipe schedule inputs
- Manufacturer-approved engineering outputs
- Improve project efficiency and flexibility
- Import multiple transits to speed up design work
- Reduce project risks

THE ROXTEC SEALING SYSTEM

Superior flexibility

Roxtec sealing solutions for cables and pipes ensure safety, efficiency and long-term operational reliability in a wide range of marine projects worldwide.

Our invention for adaptability, Multidiameter™, is a solution based on rubber modules with removable layers. It allows for a perfect sealing, regardless of the dimension of the cable or pipe. This flexibility simplifies planning and design, speeds up installation work and reduces the need for stock, material and logistics. It also provides built-in spare capacity for cost-efficient maintenance and future upgrades.

Breaking innovation

The Roxtec solution has revolutionized the design and the process of cable routing and pipe installation. Thanks to Roxtec Multidiameter, each module can handle a number of cable and pipe sizes. It is also possible to add extra capacity from the start. Users can therefore perform their tasks without knowing the size or number of cables or pipes in advance – which reduces engineering hours.

Flexible components

The Roxtec sealing system is a mechanical sealing solution available for various applications, including multiple as well as

single-cable and pipe penetrations. In most Roxtec transits, the sealing modules are inserted around cables or pipes in frames that are welded or bolted to the structure. The frames are available in different shapes, materials and sizes for different applications. The system is sealed with a Roxtec Wedge or an integrated compression unit.

Adaptable modules

The Roxtec system means very few parts. With six basic Roxtec module sizes, you can easily seal cables and pipes from 4 mm to 99 mm in diameter in transits with multiple openings. Standard versions of single penetration seals handle cables or pipes with a diameter of up to 580 mm. There is also a range of modules with different features, in order to cover all your safety needs. There is, for example, the EMC product line. It provides efficient solutions for bonding and grounding of armored and shielded cables as well as for electrical safety in fully shielded environments.

Few parts to make a strong barrier

This is an overview showing how very few components you need to put together a complete Roxtec sealing solution. There are rectangular and round seals available as well as practical kit solutions.

Roxtec modules

Roxtec modules in product group RM are based on 60 mm (2.362") standard depth and used for sealing of cables and pipes in walls, floors, bulkheads and decks. Modules in group CM are based on depths of 15-40 mm (0.591"-1.575"). Areas of use are entry sealing of cables and smaller hoses in cabinets and enclosures. Both groups, RM and CM, are available for the EMC and Ex application areas.

- Roxtec RM modules with Multidiameter™ are adaptable to cables and pipes with OD 3.0-99.0 mm (0.118"-3.898")
- Roxtec CM modules with Multidiameter™ are adaptable to cables and pipes with OD 3.5-34.5 mm (0.138"-1.358")
- When used with a solid core the module functions as a spare module for future capacity needs.

Roxtec RM modules

Roxtec RM modules

Roxtec Stayplates

Roxtec Stayplates provide mechanical anchorage for the modules in order to keep them in the frame and protect against blow-outs. To be inserted between rows of modules in frames with a rectangular packing space and no built-in compression.

- The Roxtec Stayplate is for use with Group RM frames and components
- The Roxtec C Stayplate is for use with Group CM frames and components

Roxtec Lubricant/ Roxtec Assembly Gel

The lubricant is natural tallow used to lubricate the sealing modules, the Roxtec Wedge and the inside of the frame. This provides correct compression and a secure seal. The assembly gel is intended for Roxtec ComSeal™ LW and Roxtec ComSeal™.

CABLE ENTRY SOLUTIONS

Regular frames and seals

Roxtec regular cable transits for decks, bulkheads, floors and walls are successfully used in the shipbuilding industry since 1990.

Roxtec regular frames are available in different designs and materials, such as mild steel, stainless steel and aluminum, and they can be attached either through bolting, welding or fitting into sleeves. The depth of the frames is normally 60 mm (2.362"), and they are filled with standard RM modules of the same depth. Together the modules cover a cable diameter range of 3 to 99 mm (0.118"-3.898"). To complete the installation and seal the transit, you also need lubricant, stayplates and a wedge. The seals are also available for use in EMC and Ex applications.

Roxtec S frame

Roxtec S frame is a metal frame available with a single opening, or in combinations with several openings in width and/or height.

- For use with Group RM components
- Attachment by welding

S frame, primed mild steel

S 6x1 primed

See parts needed for a complete solution on page 26.

See installation instructions on page 222.

See practical user guidelines on page 264.

Remove primer from the inside of the frame to ensure good conductivity in EMC applications.

For information about other frame combinations, or for openable versions of this frame, please contact your local Roxtec supplier or e-mail: info@roxtec.com

Roxtec SRC frame

The Roxtec SRC frame is a metal frame intended for load bearing structures. Designed with rounded corners to reduce stress concentration and the risk of cracks around the frame. Available in two standard versions, SRC r20 and SRC r40.

- For use with Group RM components
- Attachment by welding

SRC frame, corner radius 20 mm, primed mild steel

SRC 6x1 r20 primed

See parts needed for a complete solution on page 26.

See installation instructions on page 226.

See practical user guidelines on page 264.

For information about other frame combinations,
please contact your local Roxtec supplier or e-mail:

Note: All dimensions are nominal values

Packing space

Roxtec SK frame

Roxtec SK frame is an S frame with extended depth. This enables, among other benefits, angled installations and/or increased distance between the packing space and the steel section.

- For use with Group RM components
- Attachment by welding

SK frame, primed mild steel

SK 6x1 primed

See parts needed for a complete solution on page 26.

See installation instructions on page 222.

See practical user guidelines on page 264.

Remove primer from the inside of the frame to ensure good conductivity in EMC applications.

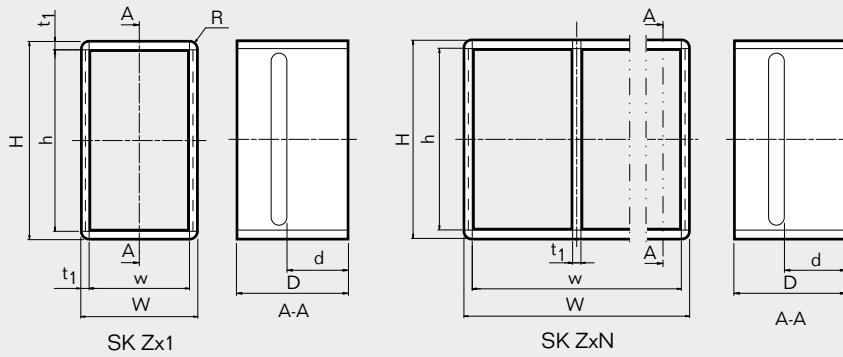

For information about other frame combinations, please contact your local Roxtec supplier or e-mail: info@roxtec.com

Roxtec SBTB frame

The Roxtec SBTB frame is a metal frame with two packing spaces behind each other (back-to-back). The SBTB frame is designed to meet high levels of fire protection and for easy verification of pressure tightness after installation.

- For use with two sets of Group RM components
- Pressure test pipe available
- Attachment by welding

SBTB frame, primed mild steel

SBTB 6x1 primed

See parts needed for a complete solution on page 26.

See installation instructions on page 222.

See practical user guidelines on page 264.

Remove primer from the inside of the frame to ensure good conductivity in EMC applications.

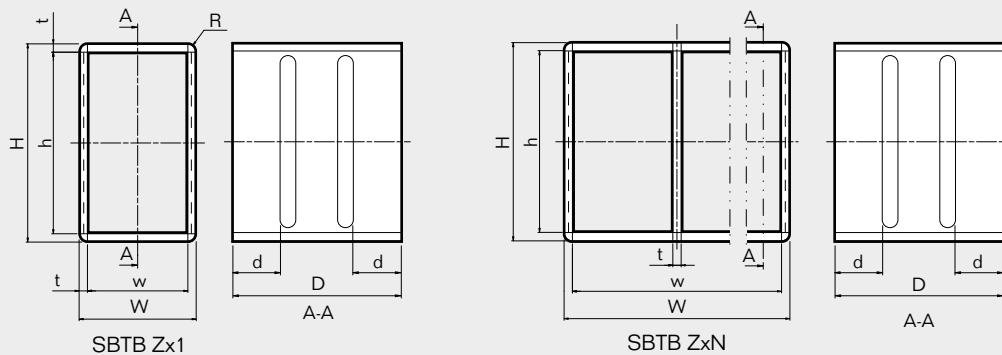

For information about other frame combinations, please contact your local Roxtec supplier or e-mail: info@roxtec.com

Roxtec GHM frame

The Roxtec GHM frame is designed for installation through bolting where welding is not suitable. The frame is sealed onto the structure by use of the TSL sealing strip.

- For use with Group RM components
- Attachment by bolting
- Drilled according to standardized hole pattern

GHM frame, primed mild steel

GHM 6x1 primed

See parts needed for a complete solution on page 26.

See installation instructions on page 222.

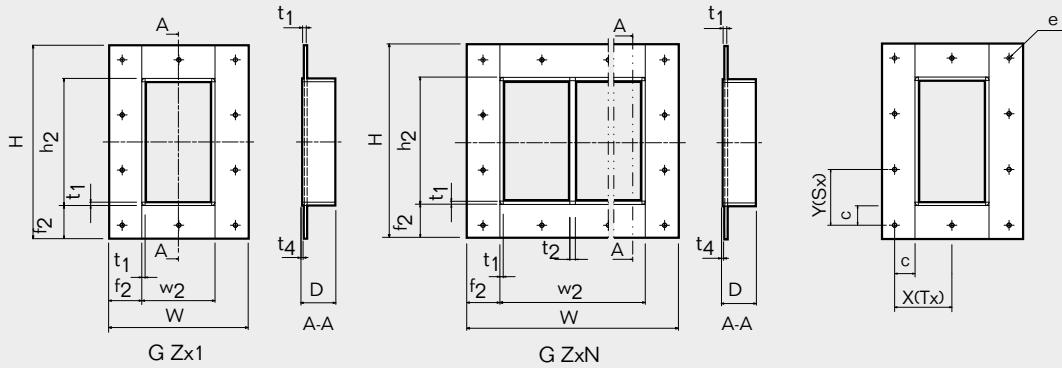

See practical user guidelines on page 264.

Remove primer from the inside of the frame to ensure good conductivity in EMC applications.

For information about other frame combinations, please contact your local Roxtec supplier or e-mail: info@roxtec.com

Roxtec R frame

The Roxtec R is a round expansion frame with a square packing space for cables and modules. Compression is integrated in the frame. Allows installation around existing cables.

- For use with RM modules
- Attachment by expansion in sleeves
- Sleeves are available

R frame, galvanized fittings

R 100 galv

Roxtec RS seal

The Roxtec RS is a round entry seal, consisting of two halves and an adaptable center with removable layers. Compression is integrated in the seal. Allows installation around an existing cable.

- Attachment by expansion in holes
- For one cable
- Sleeves are available

RS seal, with core, acid-proof stainless steel fittings

See sleeves on page 73.
See installation instructions on page 233.
See practical user guidelines on page 264.

Roxtec RS OMD seal

The Roxtec RS OMD is a round entry seal, consisting of two adaptable halves with removable layers on both the inside and the outside. Compression is integrated in the seal. Allows easy installation around an existing cable.

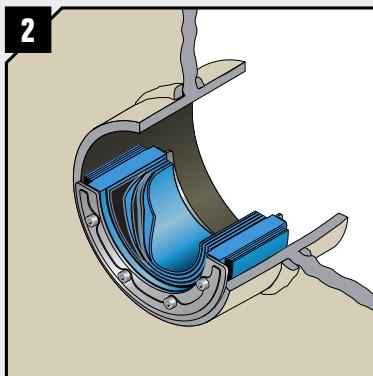

- Attachment by expansion in holes
- Adaptability on the outside to fit round openings of varying sizes
- For one cable

How it works

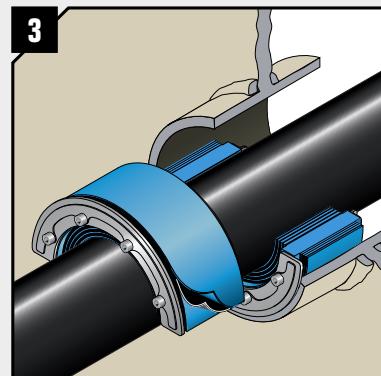

The example shows the features that make it quick and easy to install the RS OMD.

The Roxtec RS OMD has two halves equipped with removable layers on the outside. It can easily be adapted to fit openings of varying sizes and non-standard sleeve sizes.

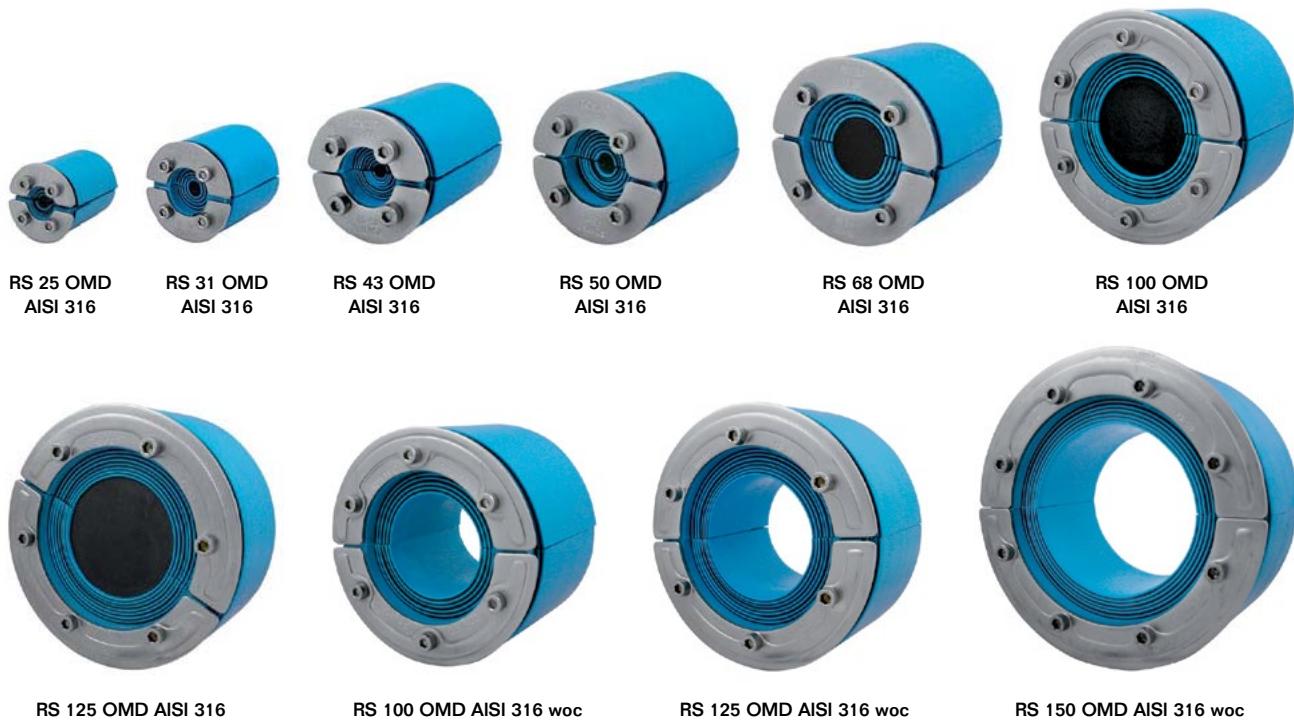

Each half of the seal is also equipped with removable layers inside in order to be adaptable to cables of different sizes.

Each half is adapted on the inside and on the outside and the flexible solution is sealed by expansion.

RS OMD seal, acid-proof stainless steel fittings

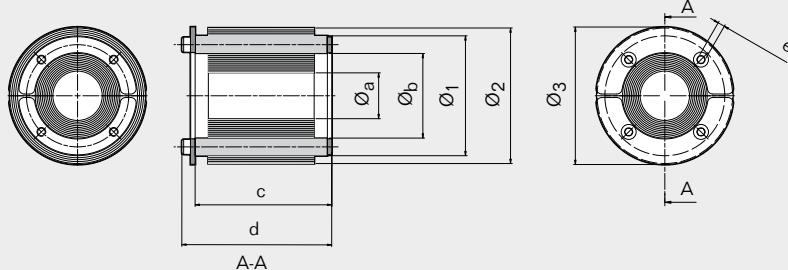

Installation instructions are available on www.roxtec.com

Roxtec R X, RS X seals

The Roxtec R X and RS X solutions are designed for use where welding is not desired. The kit consists of one R or RS seal and one sleeve.

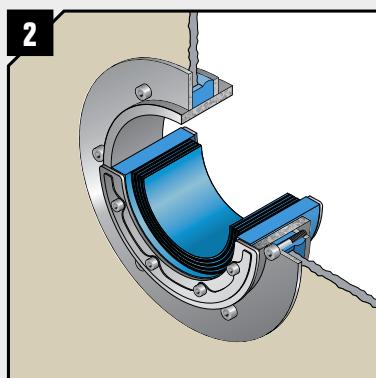

- R X for use with RM modules
- Attachment by expansion
- For one or several cables

How it works

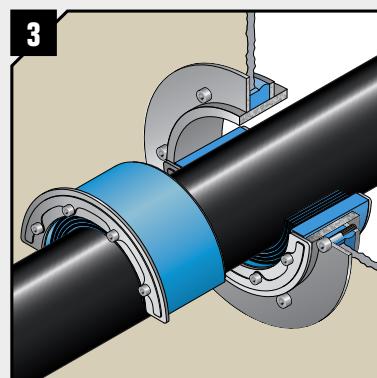

The example shows the features that allow the RS X to be installed in a deck or bulkhead without welding.

The Roxtec RS X is attached through expansion. Its rubber compresses and expands towards the inside of the opening to create tightness between the structure and the SLX sleeve (included in the kit).

The standard operation of the seal also compresses the rubber against the outside of the cable.

Each half of the seal is equipped with removable layers in order to be adaptable to any existing cable.

Enclosure solutions

Use Roxtec multi-cable entry seals for control cabinets, junction boxes and other electrical and instrumentation enclosures.

The seals secure and protect equipment within stainless steel, metal, plastic and composite enclosures. Roxtec solutions often pay for themselves by allowing for high cable density which enables designers to reduce the size and weight of the cabinets. The seals are always ready for last minute changes – and you can easily add new cables or change cables in your cabinets. The seals are available in EMC versions.

Roxtec ComSeal™ LW

The Roxtec ComSeal LW is a light-weight and area efficient cable sealing solution for cabinets. The frames are made out of cast aluminum and the solutions are approved for IP 44 and UL/NEMA 3R. They are equipped with adaptable sealing modules and supplied as ready-made kits.

- Available in three different sizes
- For use with Roxtec EM modules
- Attached on inside or outside of cabinet
- Version available for the FL 21 cut-out
- Only for use in enclosures

Roxtec ComSeal™

The Roxtec ComSeal is a light-weight and area efficient cable sealing solution for cabinets. The frames are made out of cast aluminum or cast acid-proof stainless steel, AISI 316, and the solutions are approved for IP 55 and UL/NEMA 3, 12, 12K. They are equipped with adaptable sealing modules and supplied as ready-made kits.

- Available in six different sizes
- For use with Group CM components
- Attached on inside or outside of cabinet
- Only for use in enclosures

ComSeal™ kits, integrated compression unit, aluminum

See installation instructions on page 241.
See practical user guidelines on page 264.
