CATALOGUE 2022

**Our focus is to continually develop superior standard products and services for our partners. We strive to provide certified apparel created for comfort, without compromising on the safety of our end users. Additional attention is paid to the interaction of multiple PPE items worn concurrently to ensure safety and comfort in all conditions. We treat each customer as an individual with products and services designed to meet their needs.**

stay safe.

## VISION

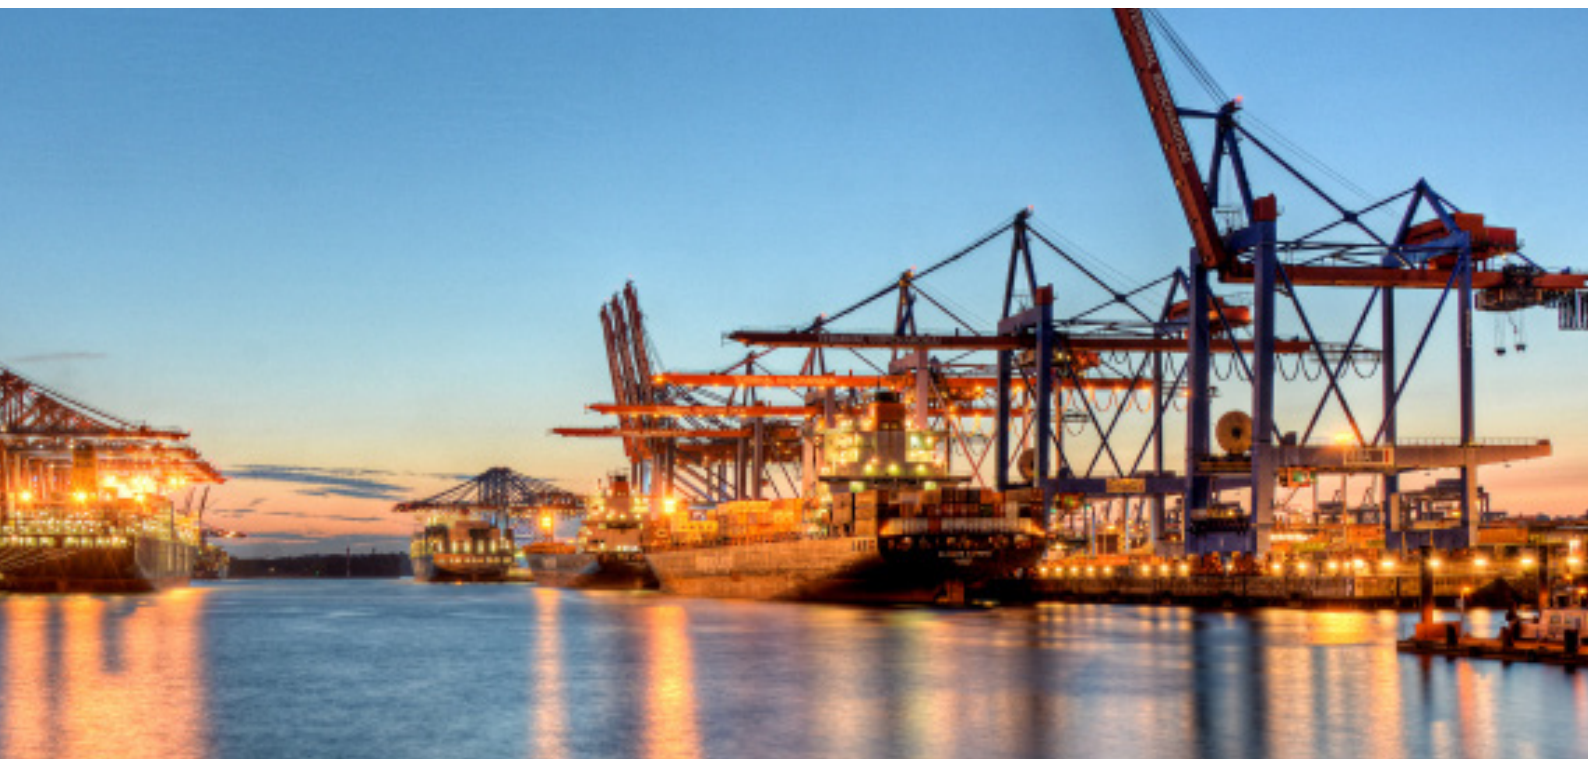

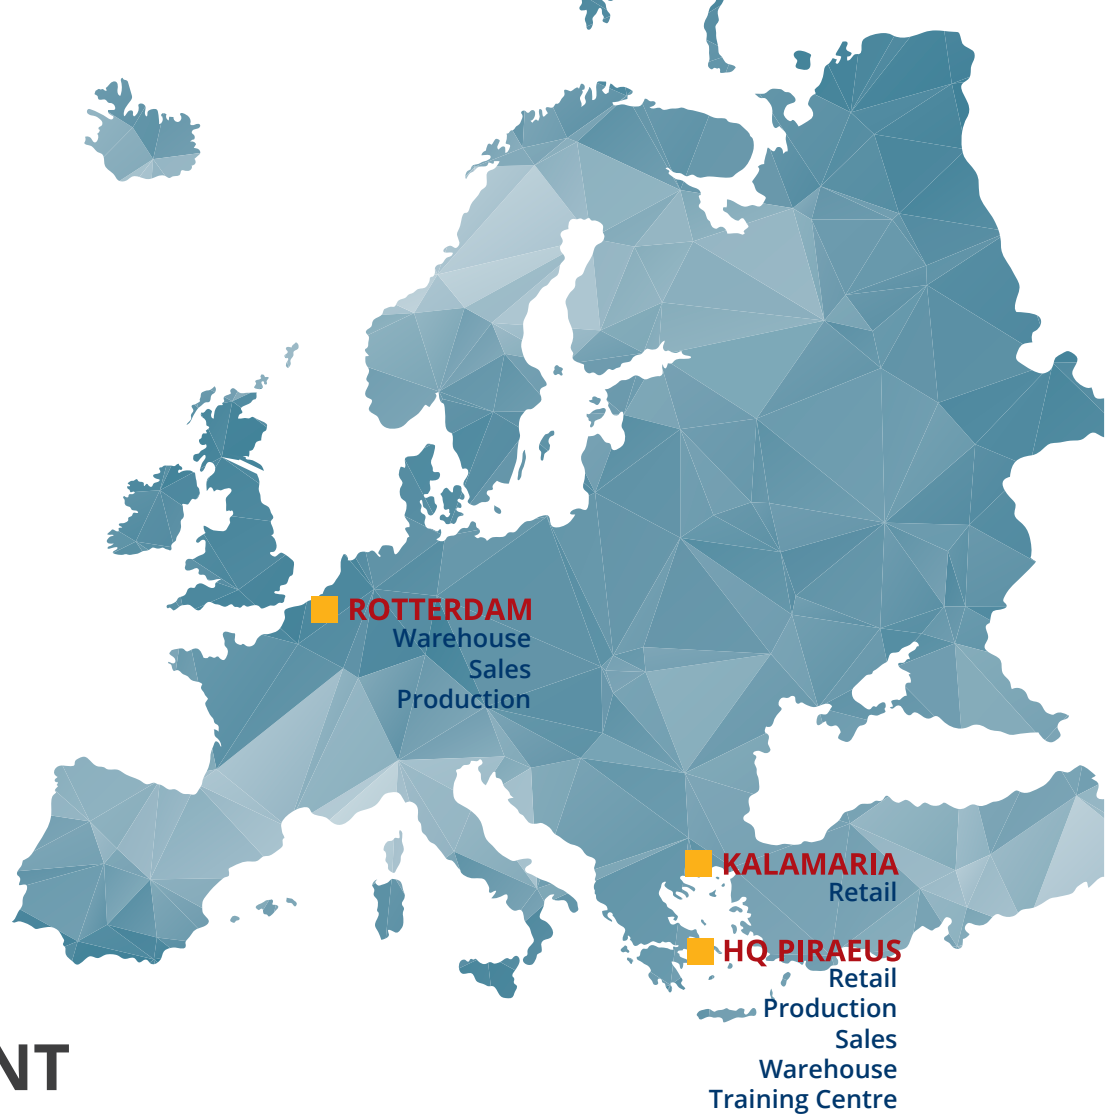

To provide safety and comfort to seafarers in any working environment.

## MISSION

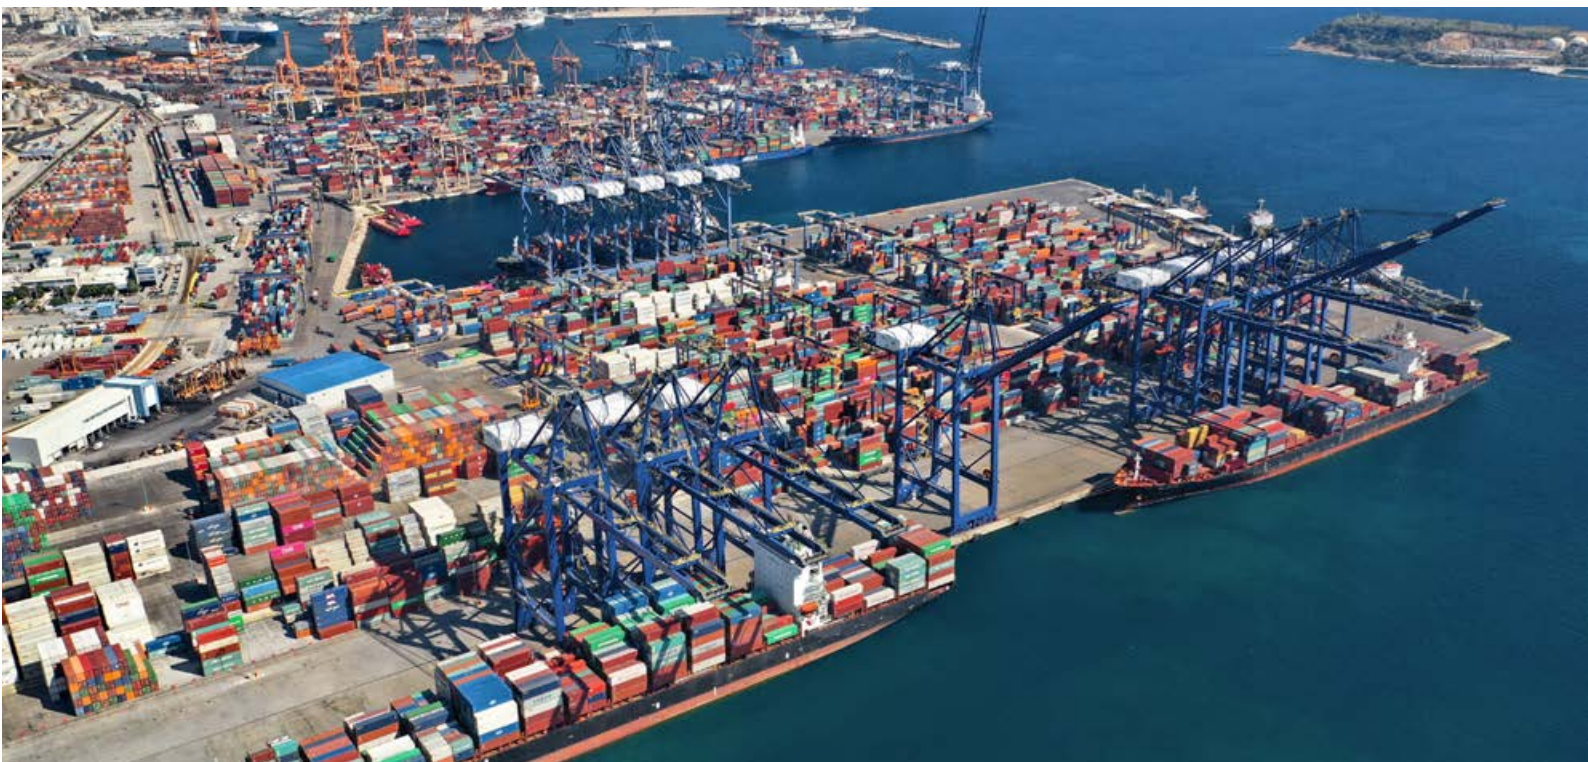

To deliver dependable solutions for on-board apparel and equipment needs, delivered seamlessly worldwide.

## COMMITMENT

Our continuous commitment to learning, education and development, to innovative products and services, helping our customers make a difference promoting a culture of safe seas, ethical practice, conscientious consumption and seafarer wellbeing.

Located at the heart of Greek shipping in the port of Piraeus, STOP specializes in Personal Protective Equipment for over 45 years. We produce and distribute high quality safety equipment including workwear, safety footwear, gloves, head protection, fall protection, respiratory protection and gas detectors.

We have led the Greek market since 1978 and remain dedicated to our mission; For the last 25 years, our core focus has been to service the shipping industry with a presence in The Netherlands since 2013 and a dedicated staff of over 90 employees.

STOP holds the accolade for the implementation of the first "CE" mark on a Greek personal protective equipment product by the Ministry of Development, received the 1st award of Quality Production by the Greek Chamber of Commerce and was the first Greek company to receive the ISO 9002 certificate. Today, our commitment to safety is stronger than ever and we continue to develop and design PPE, in cooperation with our customers to promote a culture of safety on board, delivering a full range of high quality PPE.

We specialize in the production of workwear, including boilersuits, winter garments, arctic clothing, welders' apparel, firefighting suits with MED approval, garments for protection against electric arc and a full range of

leather and synthetic gloves for general purpose use and against thermal risks. Our production is certified to produce category III PPE. We are committed to sourcing materials and offering services in ways that are socially responsible, acting proactively to minimize any negative effects of our operations on the environment. We are minimizing the use of plastic for our packaging, choosing plant-based and sustainable resources in place of traditional non-biodegradable packaging. Human rights, non-discrimination, anti-corruption, environmental responsibility, health & safety are key factors in our operations. We assess our suppliers effectively by evaluating both their operational capabilities and their compatibility with our company's environmental and social standards. Our experienced and well trained team are available to offer on site risk assessment and technical assistance.

Our facilities in Piraeus and Rotterdam are comprised of sales, customer service, production and warehouse facilities. In Piraeus we operate a training and service center for fall protection and gas detection. Our dedicated customer service team process POs through our integrated ERP and WMS systems offering quick order processing and streamlined worldwide deliveries. State of the art logo printing presses, vinyl logo printers and embroidery machinery are operated by our specialist production teams applying company profile logos to all workwear and safety helmets.

PERSONAL PROTECTIVE EQUIPMENT

stay safe.

Our new hub in the heart of Piraeus port with over 4,000 palette spaces will be operational at the end of 2022.

Our hub will be the first Leadership in Energy and Environmental Design (LEED) certified warehouse in Greece and is expected to reach the GOLD LEED standard. This defines our immovable commitment towards sustainable development and constructs the framework for a healthy, efficient and green future. All energy demands of the building will be supplied via the photovoltaic roof including the energy supply for our new fleet of electric last-mile delivery vans.

The site will reintroduce 1,500m<sup>2</sup> of indigenous plants

and trees to the highly urbanized port of Piraeus. This green zone will be watered entirely with rain water collected from our new building.

Consolidated logistics for Piraeus in single location will streamline our order processing, and improve order fulfillment times. By increasing our warehousing capacity in Piraeus, higher volumes and an expanding assortment will offer more flexible options to the end user.

We are expanding our production capabilities to include new and additional state of art embroidery machinery supplementing our existing company logo profiling solutions that include cutting-edge direct to garment

digital printing, heat-transfer logo printing and in-house vinyl logo creation. All lighting in the building uses high efficiency dimmable motion-activated LED lighting.

STOP in Rotterdam was established in 2013. Our operations here are held in facilities of 1,000m<sup>2</sup>. In 2017 STOP relocated from a 3rd party logistics partner into a new privately owned facility. With a complete range of more than 7,000 SKU's dedicated to the shipping industry, logo printing production and heat-transfer capabilities.

STOP, since 2021, is providing a logistics service in Singapore and is looking to expand the range our products and services available in our Asian Hub.

## TRAINING SEMINARS

To reinforce safety awareness and provide knowledge on safety at work, STOP organizes and conducts theory and practical training seminars. Our seminars are presented by authorized and duly certified personnel to cover to the proper use of PPE, proper use of hearing protection and ear fit evaluation, proper use of respiratory protection and fit evaluation, seminars for work at height including installation, inspection, & maintenance of permanent vertical systems; confined work spaces; work with chemicals; Customized training seminars tailored to the individual needs of specific working environments e.g. wind farms, refineries, foundries, telecommunications.

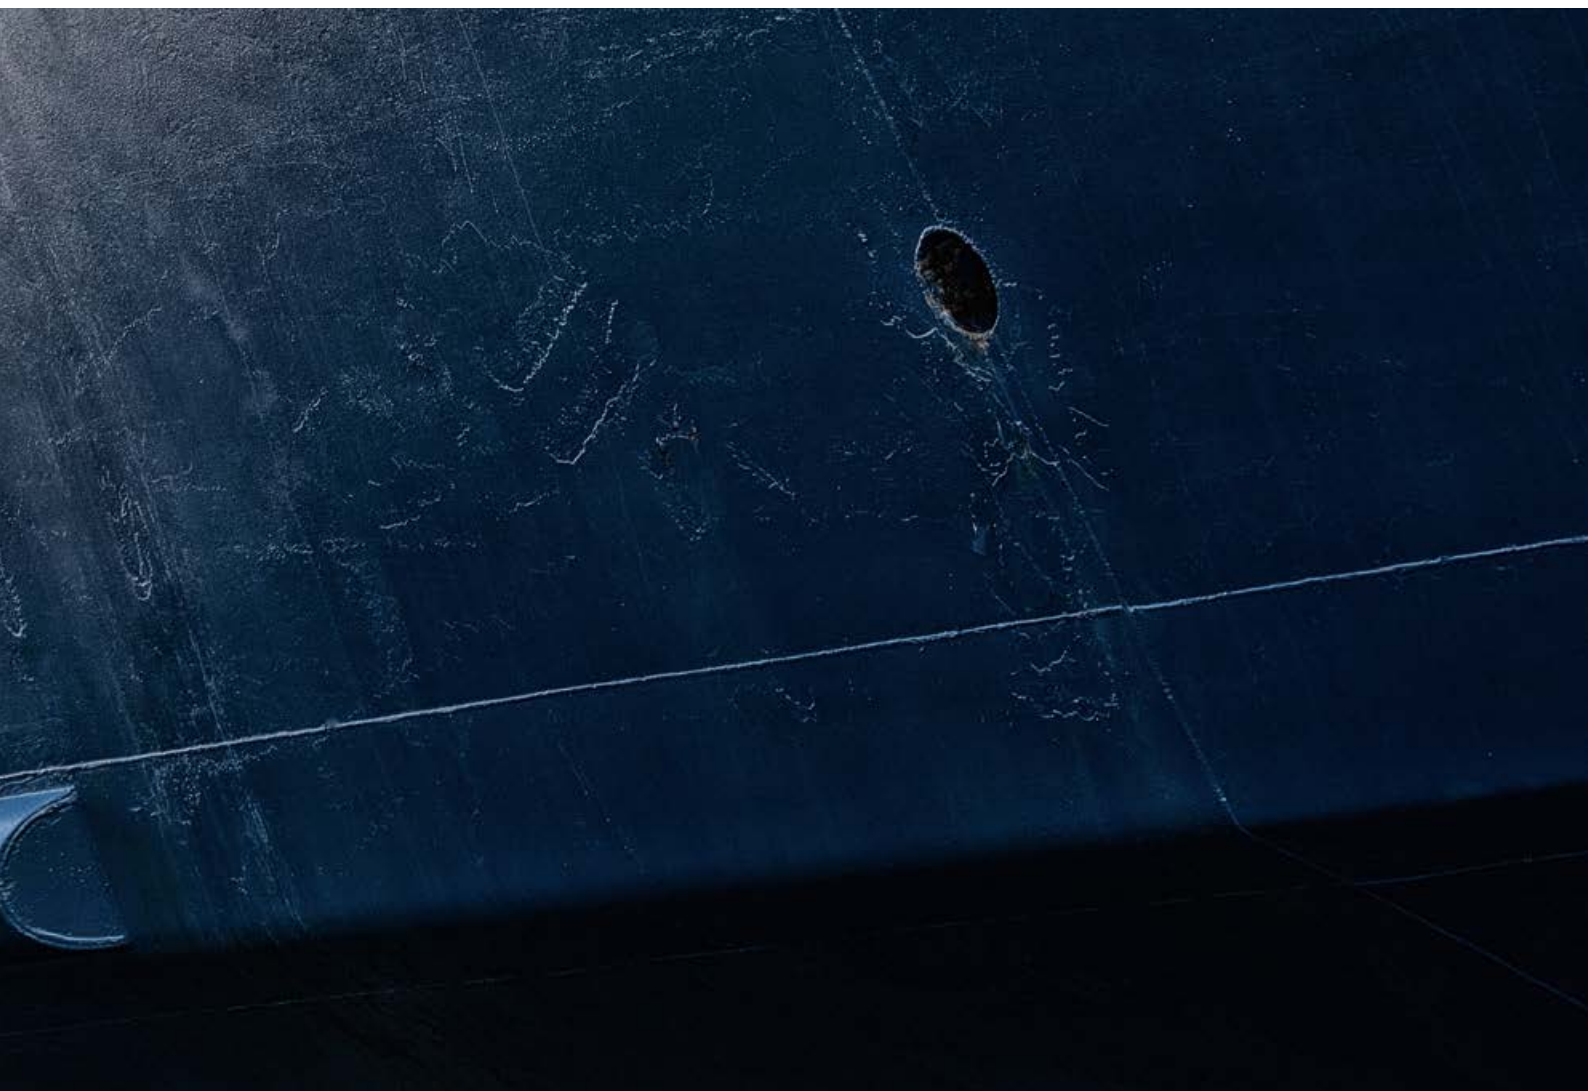

## SOLUTIONS' ENGINEERING

Beyond the conventional solutions to safety issues in the work place, we offer customized solutions designed to address the customer's specific concern. We listen to their needs, study the risks at hand and propose possible solutions to be discussed with the customer. From designing a technical garment or glove, to the design & installation of safety systems for work at height, we are here to offer our assistance and expertise. Over our many years of operation we have successfully executed a number of projects for our customers in shipping, oil & gas, petrochemical, food & energy industries, construction and logistics.

## COMPANY PROFILING

Piraeus facilities are equipped with the latest printing and embroidery machinery. Our capabilities are ever-growing following the expansion into our new warehouse. Create a strong visual identity while doing what you do best. Direct to garment printing offers a seamless solution for t-shirt and lightweight, cotton, afterwork wear products. Heat-transfer logo application is preferred for all foul weather garments. Add additional reflective tapes and logos to enhance your visibility. Add certified fire retardant logos to your multinorm gear, maintaining all the safety standards while sharpening your companies profile and visibility across the fleet.

## CUSTOMER SUPPORT

Our dedicated customer-centric support team specialises in delivering fast and reliable responses to RFQ, via our integrated WMS tools - handling and forwarding your orders globally. Now more than ever, the freight pressures have driven our team to offer reliable and cost-effective solutions. Our after sales services keep track of your equipment & inform you about maintenance, calibration, life cycle or safety issues. Our service station in Piraeus is fully authorised by honeywell Analytics as Master Service Center for Greece and Cyprus. Since 2004, we are a certified service center for Scott Safety products. We offer technical support, inspection and service of their respirator equipment.

## WORLDWIDE LOGISTICS

Our extensive experience working with the shipping industry enables us to arrange seamless world-wide delivery of goods. We supply 3rd party hubs in Singapore, Manila, the UAE and Cyprus with our product range. Our growing storage capacity and stock inventory in Greece and the Netherlands, ensures fast, reliable and efficient service of bulk orders. We offer competitive prices, quality products, customized solutions and delivery across the globe. With new partnerships in Singapore, our products can be supplied on the spot. Our streamlined processes alleviate time-sensitive concerns of any buyer in shipping.

## PRODUCTION DEPARTMENT

We offer vertically integrated production capabilities of winter clothing, crew apparel, boilersuits and technical garments, all customizable with the option to add your company profiling requirements. Our EU production of galley wear is produced using OEKO-TEX certified fabrics that are free from harmful substances. We work closely with suppliers like Tencate and Marina Textile for our technical garments. PPE category III workwear range is growing. Recent additions include welders' head to toe protective clothing, new inherent FRAS boilersuits produced from sustainable and eco-friendly fibres as well as MED approved fire-fighting suits.
