General Ship Repair

We execute a wide range of General Ship Repairs - ashore and aboard

Our qualified and experienced welders are certified by the American Bureau of Shipping and can provide a wide range of welding repairs during a port stay, at anchorage or sailing with the vessel.

We assist our customers to ensure a repair is completed on time and avoid delays.

Additional repairs include steel & pipe fabrication with a protective coating, rewinding of electrical motors and many more applications.

After repairs of cranes or davits we have the necessary equipment in order to perform the class required load test.

The combination of factory trained technicians, our in-house engineering expertise and the technical backup of principals we will solve your technical problems at any time.

As a preferred service provider for TTS Kocks, Broehl etc, we provide service, repair, maintenance and spare parts for a wide range of their products.
