

## Your Reliable Worldwide Turbocharger Provider

Service – Parts Supply – Remanufacturing

# Remanufacturing

## Materials Testing & Welding Expertise

Our state-of-the-art material testing facilities and expert welding techniques guarantee precision and quality in every repair and reconditioning process. We also conduct various non-destructive tests for crack detection after welding, such as dye penetrant methods and x-ray sample batch testing, especially when certifying our welding technicians.

## Blade Repair and Reconditioning

Our blade repair and reconditioning services utilize advanced techniques to restore damaged blades to their original specifications, ensuring optimal performance and extended lifespan.

Marine Turbo often uses remanufacturing techniques that include laser measuring multiple points on a single blade.

## Air Filtration Solutions

Our air filtration solutions ensure optimal performance and longevity of your turbochargers. We work with both silencer systems and the reconditioning of air filters to maintain peak efficiency.

We specialise in radial repair and precision machining, using state-of-the-art equipment to ensure accuracy and quality in every repair job.

## Radial Repair

## Management Quality & World Wide Warranty

You can be assured that Marine Turbo is a company that takes quality seriously. We set high standards and have systems in place for monitoring and managing quality.

We base our qualifications and processes on several Testing Standard Codes, including BS EN 15614-2:2005, ISO 10042:2018, and ISO 23277:2015 2X, affiliated with TIG welding processes.

You can be assured that our guarantee is a promise of worldwide warranty coverage of £10-20M proven with 5 star London UK, underwriters, for a minimum of 12 months.

TEST CERTIFICATE: MAN215547

MACRO EXAMINATION TO BS EN ISO 17639:2013

Location	Position	Macro Examination
Transverse	Finish	Acceptable - No defects observed

PHOTOMACROGRAPH (x2 Nominal)
