COMPANY PRESENTATION

SF MARINE is located in the Principality of Monaco, a main centre of marine activities.

A basic philosophy adhering to a "QUALITY SERVICE" is the reason we selected the best Suppliers available in the market, in terms of quality of products and competitive prices.

The essence of our business is focused around a constant dedication to customer satisfaction and total quality management.

The team is composed of professionals with diverse technical, operational and corporate exposure in shipping, power generation and industrial supplies.

We are available to offer not only the appropriate technical advice, but also direct assistance, wherever you may be, should the need arise.

SF Marine is not directly affiliated to any brand and/or maker. The use of part numbers / models / types / names is for reference only. It is not intended that SF Marine parts are supplied by Original Makers.

- Air compressors
- Refrigerator Compressors
- Oil water separators
- Plate heat exchangers and fresh water generators
- Pumps complete and spare parts
- Oily/Bilge Water Separator
- Air Filters
- Filter Housing
- Fuel Filters
- Oil Filters Water

- Purification Water Treatment
- SEAL SERVICE on stern tube and shaft seals
- PROPULSION SERVICE maintenance and repair of CPP, FPP, thrusters and bow thrusters
- PRIME PARTS stern tube seals, retrofits, bearings, liners, blade foot sets, O-rings and much more

SPARE PARTS LIST

Compressors

Via our channel of suppliers, we have an extensive range of O.E.M. and replacement spare parts for most of the marine air and refrigeration compressors. Our team of engineer's workshop design and produce spares in accordance with the most stringent international quality standards.

This allows us to provide all the necessary components to overhaul a compressor, from a small gasket to major items such as blocks, heads, and crankshafts.

SF Marine presently supplies complete reconditioned units, rebuilds and tested in the supplier's workshop.

Pumps Complete and Spare Parts

SF Marine has been supplying spare parts belonging to most of European and Japanese brands since 2005. The numbers of models made by each maker requires a deep knowledge of all parts fitted and material used: for this reason, we have developed a computerized system able to classify more than 40.000 different items and drawings. Thanks to this, we can meet any spare parts requirement for more than 650 different pump's types used in the marine business.

Our program of complete brand-new units, new and reconditioned centrifugal in line pumps and new low-pressure screw pumps allow us to solve immediately most of pumps' ship needs.

Vacuum Sewage Systems

Recently SF MARINE insert in his range of products the vacuum sewage systems.

EVAC is part of SF MARINE'S wide range of products! Our constant research and cooperation with specialised companies have allowed us to develop and deliver high quality spare parts for vacuum sewage treatment devices at appropriate prices. We can supply all spare parts for sewage treatment plants (knives, rotors, valves, shaft seals...)

We can also deliver parts for Jets maintenance parts and commonly used spare parts for pumps and vacuum systems. Thanks to our best-in-class knowledge and two decades of experience, we have developed a full range of replacement parts installed in cargo or cruise vessels.

Please find below list of brands available:

- EVAC 90

Systems for Safety, Environment and Navigation

We are exclusive agents in the Principality of Monaco for **Consilium Marine & Safety AB**.

Consilium is one of the world's leading suppliers of fire and gas detection, navigation and emission monitoring systems for ships, property, transportation and the oil & gas industry.

Consilium develops and markets products and systems for safety and navigation. The guiding star

in Consilium's selection is to contribute to safeguarding people, the environment and material values.

Consilium has a worldwide network of subsidiaries and agents in order to provide the best support for our customers.

Our support includes everything in the range from service and maintenance of all our systems to spare parts and full retrofit installations. Marine safety is our key business; therefore, we work in close corporation with our customers and users in order to know their needs and requirements.

Consilium is represented through subsidiaries and agents in more than 50 countries including all major ports around the world. To further increase the service and availability of spare parts, all our subsidiaries are able to handle all enquires and demands.

AEGR Marine B.V. & Propulsion Service

We are exclusive agents in the Principality of Monaco for AEGIR-Marine B.V. & AEGIR-Marine Propulsion Service.

Since its foundation in November 2000, AEGIR-Marine has transformed from a small service-directed company to a maker independent organisation for stern tube seals and bearings, with offices in The Netherlands, Shanghai, Singapore, Namibia and the USA, as well as sales representatives in many countries. As an ISO 9001 (2000) certified company, AEGIR-Marine values quality and service to the highest level reachable.

AEGIR-Marine provides service on any type of stern tube seal when a vessel is in dock or afloat. They can even provide service underwater, for which they have an exclusive partnership with UPE in Vlaardingen.

With service engineers all over the world, they do not have any restrictions regarding service locations – AEGIR-Marine can help you anywhere you need them to be.

To meet their own service standards, AEGIR-Marine has its own PRIME spares suitable for systems installed by Wärtsilä, Dover Japan, Japan Marine Technologies and many more on stock. They can also supply liners, spacer rings, zinc anodes, net cutters and all consumables suitable for every type of 'lip-type' stern tube seal installation – all from their warehouse in the Netherlands. AEGIR-Marine very own PRIME sealing system, type-approved by many class societies, has been tested to be equal to – if not better than – sealing systems supplied by the major original manufacturers.

To assist their customers further, AEGIR-Marine founded AEGIR-Marine Propulsion Service (AMPS) in January 2009. This division is specialised in repair and maintenance of bow thrusters and propulsion units, which can be done in their warehouse, in-situ or when a vessel is in dry-dock.
