

LNG Ship-to-Ship Transfer System Announcement

TRANSFER ANNOUNCEMENT

STS Marine Solutions is pleased to announce our expanded capability for quick response LNG Ship-to-ship services

With the objective of increasing our availability and quick-response LNG transfer equipment solution, STS Marine Solutions has invested in a new state-of-the-art Manntek Transfer system. Available now, the bespoke mobile 8" 18m hose system is designed for seamless integration with LNG vessels worldwide and offers unparalleled flexibility with a system flow capacity of 1250m³/hr for small scale operations up to a maximum 7500m³/hr to conventional STS operations.

The system will serve the spot LNG transfer market initially within the European area – but is available for worldwide service.

LNG TRANSFER SYSTEM, GEOGRAPHICAL POSITIONING

Strategic positioning of the transfer kit within the Netherlands allowing immediate mobilization through our trusted Logistics Partners.

Positioned in bonded storage close to Schiphol Airport or the ports of Amsterdam and Rotterdam, the transfer kit is ready for immediate mobilization by Air, Road, Rail or Sea. Although strategically positioned for the European market, the kit can be flown worldwide for urgent LNG STS Requirements.

LOGISTIC SOLUTIONS

With 24 STS base locations worldwide, several with LNG STS area approvals in place we are well-positioned to find an LNG transfer solution for you. We also have expertise in developing new STS areas, working with Local Authorities and Stakeholders to gain approvals when needed.

The Manntek kit joins an existing inventory of LNG STS equipment which are strategically positioned to cover the Americas, Asia, the Middle East and Europe.

With Safety being a core deliverable in line with on-time performance, STS Marine Solutions also has a talent pool of fully employed and approved subcontract Mooring Masters/POACs and LNG Superintendents to ensure operational excellence.

WHY CHOOSE A MANNTEK SYSTEM

A Fine-Tuned Portable LNG Transfer Kit Solution

The Manntek system is the most lightweight and compact system available – this results in numerous areas where STS Marine Solutions can take advantage, making the process of organizing and executing an LNG Ship-to-Ship operation more efficient from a time and effort perspective. Such as reduced transport costs, reduced equipment lifts during Mobilization and Demobilisation from Vessels, and ease of equipment handling.

The Manntek PERCs are Nitrogen activated, this removes a degree of complexity to the system. The Simplicity of the system is its ultimate sophistication! Nitrogen activation means no additional heating or circulation systems are required when using the PERCS for LNG. There is no use of hydraulics and therefore no possibility of hydraulic leaks during the LNG Transfer procedure. no complex HPU, and zero moving parts while the system is primed.

For further details and inquiry on our system, Please Call or Email us:

PARTNER SERVICES

Port Crane Services – Supply and Maintenance – Techniplus

Crane structural and mechanical repairs.

RTG (Rubber Tyre Gantry Crane), ASC (Automated Stacking Cranes), ARTG (Automated Rubber Tyre Gantry Crane), ERTG (Electrical Rubber Tyre Gantry Crane)

Assembly/disassembly of various stackers, empty handlers and straddle carriers.

Supply and Installation and maintenance of Quay Fenders.

TECHNIPLUS

Filiale de Motherwell Bridge Industries

**MOTHERWELL
BRIDGE**

Marine Engineering Services – Motherwell Bridge Industries

Wide range of marine engineering services.

Refit and Maintenance Project Management

Hydraulic, electrical and automation specialists.

Fabrication Specialists. (Structural, Storage Tanks, Piping)

ALLCOM

Freight Forwarding Services – Allcom

Sea, Road, Rail, Air Freight

Customs Agency

All of the above partners services can be accessed through enquiries@stsms.com
