

SEPCO TECH

Epoxy solutions

for divers and underwater repairs

Underwater epoxy solutions from SepcoTech

At SepcoTech, we specialize in high-performance epoxy solutions designed to meet the unique challenges of underwater maintenance and repair. The products adhere very effectively to damp and wet surfaces, allowing divers to carry out structural repairs without the need to bring components out of the water. This reduces downtime and eliminates the need for costly dry-docking or disassembly.

No mixing

Easy application

Fast curing

UNIGRIP Aquaguard coating

Adhere in wet and humid conditions

Curing Time:
2-4 hours at 68°F (20°C)

No mixing

Heat resistance up to 150°C

Key specifications

- Strong adhesion to metallic and non-metallic surfaces.
- Excellent adhesion to GRE, and other composite materials.
- Perfect for repairing and protecting hulls, tanks, pipes, and other equipment operating in demanding environments.
- Offers excellent resistance to corrosion, chemical exposure, abrasion, and erosion.

Availability

- 265ml single cartridge coating (incl. 1 ea. Static mixing nozzle).
- 1125ml dual cartridge coating (incl. 1 ea. Static mixing nozzle).
- 57 gr. AquaFix Epoxy Putty Stick.
- 1 kg. AquaBond Filler Compound.

Application Areas

- Underwater pipeline and tank coating.
- Marine structures and offshore platforms.
- Swimming pools, spas and water tanks.
- Concrete and metal surfaces exposed to moisture.
- Repair and protection of submerged surfaces.
